

From the wheel well, on the passenger side, tube between the orange brackets. Flash was hindered by location.

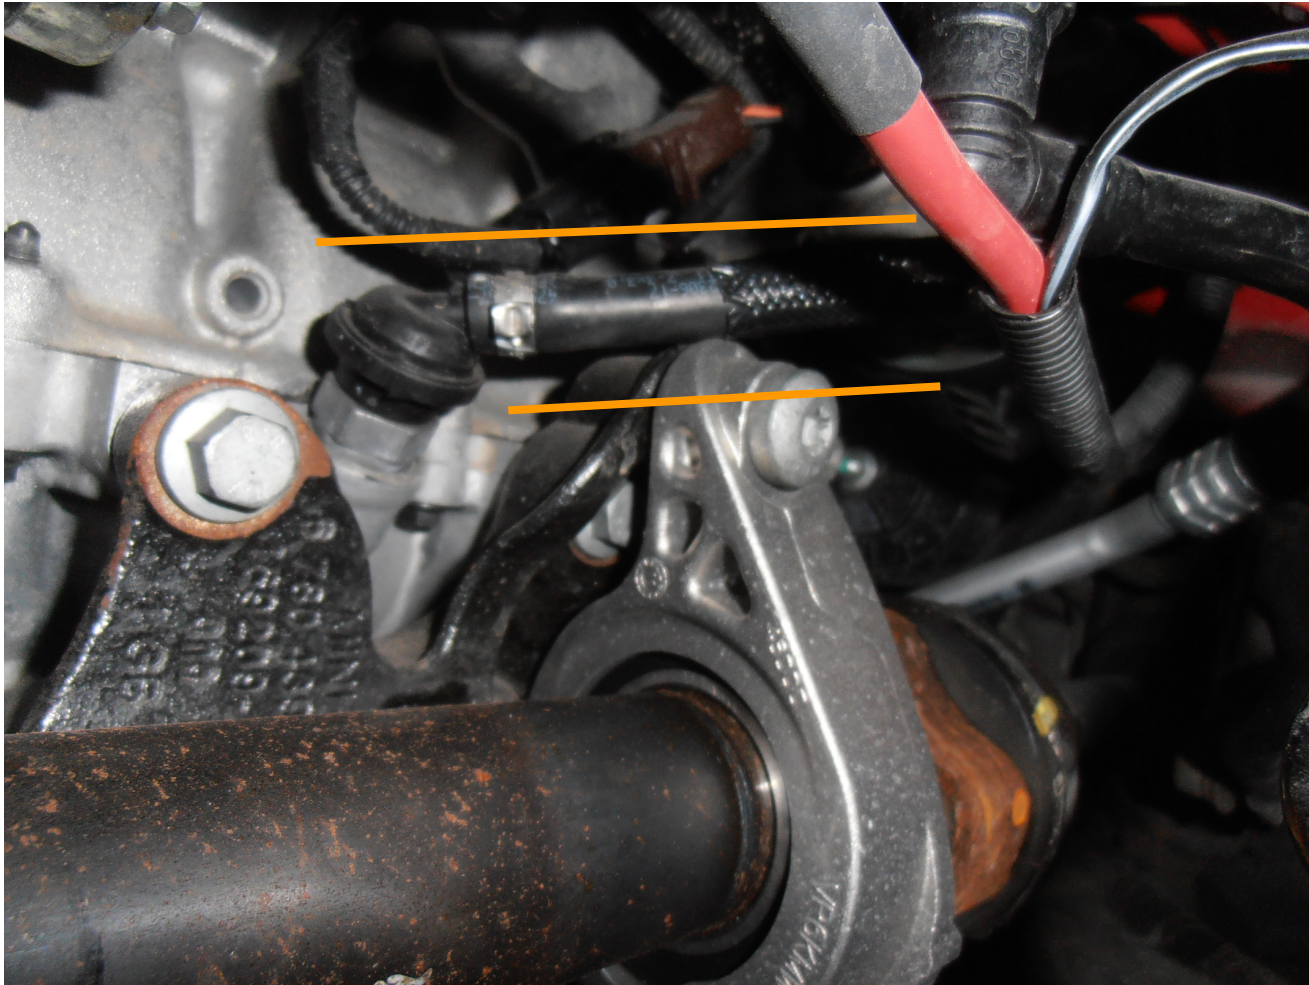

Top of engine bay, air indicates approximate upper location, on the bottom of the intake tube.

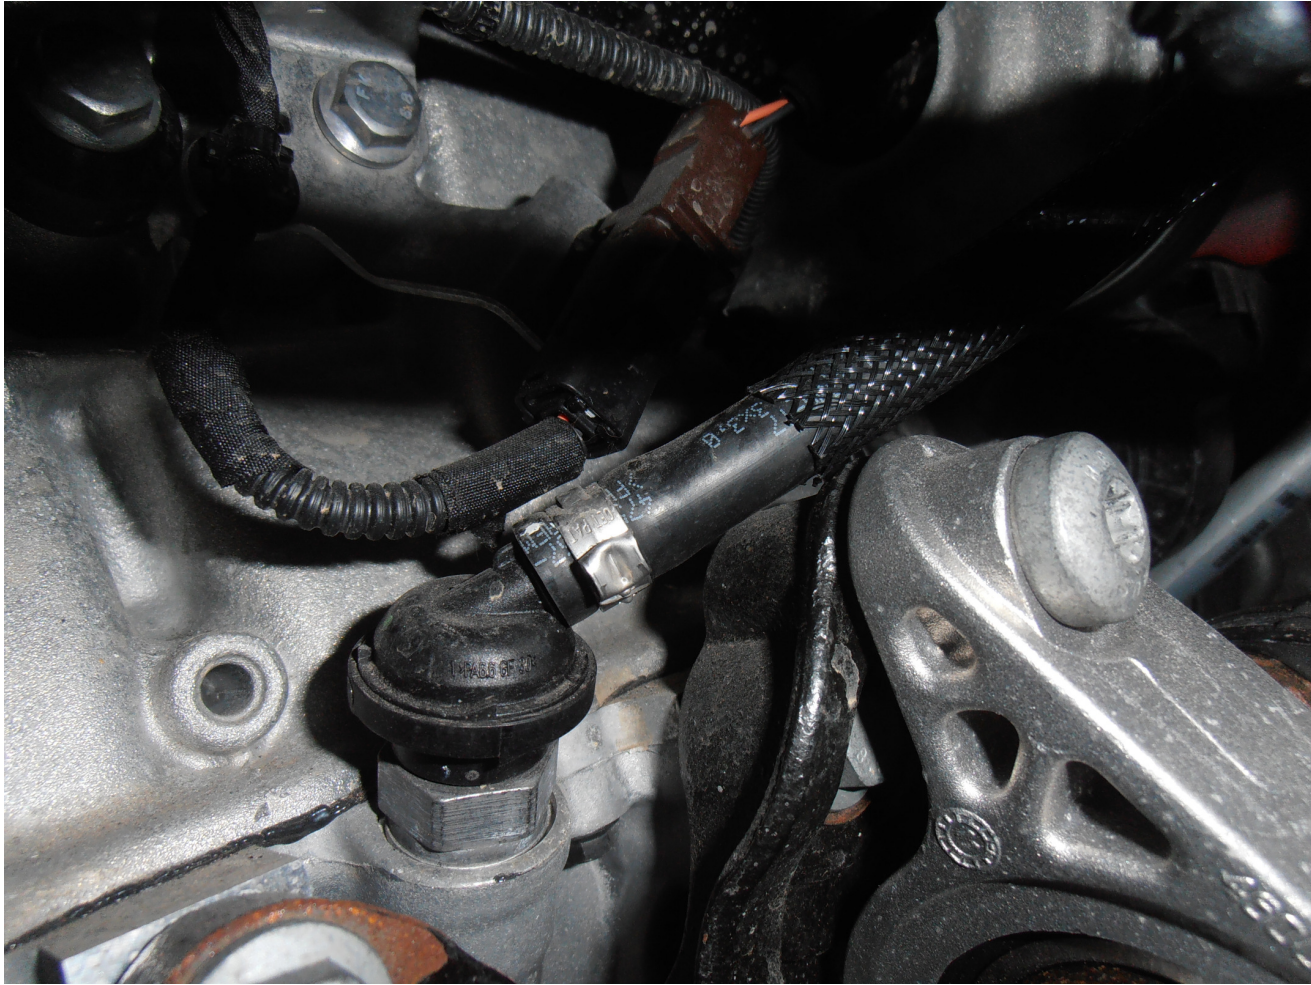

Bottom of intake at the top of this picture, this is the fitting/joint where the tube enters the intake. Picture taken with camera between firewall and engine, passenger side (location indicated on previous page)

Tubing comes to an end here. Appears to be the base of the block, with the vacuum pulling out of the engine.

Different Angle, the base of the tube looks like a threaded insert with a plastic top (possibly a check valve?)

Different Angle
